

Poker Dealing Device Incorporated with Digital Recorder System

Abstract of the Disclosure

A method for managing a card game supported by a poker dealing device and central management unit, a computerized-information-processing center includes the
5 following steps. Read the playing card that is being dispensed from the poker dealing device to generate a card signal representing a card value of the playing card in such a manner that the other playing cards, which have not been dispensed from the poker dealing device, remain in secret. Send the card signal to the central management unit by means of remote communication. Receive the card signal with a signal receiving link of
10 the central management unit. Process the card signal to record the card values of the playing cards that have been dispensed from the poker dealing device with the central management unit, such that the central management unit is capable of tracking the card values of each hand for a card game, thereby reducing a risk of cheating with reference to the recorded card values.
